Unit ID: 212

Domain: AUTOMOTIVE MECHANICS
Title: Test and service electrical system components of a vehicle
Level: 3 Credits: 5

Purpose

This unit standard specifies the competencies required to test and service electrical system components of a vehicle. It includes assessing and servicing of electrical system components and/or associated parts. This unit standard is intended for those who work as automotive mechanics.

Special Notes

1. Entry information:

   Prerequisite
   • Unit 65 - Apply safety rules and regulations in an automotive mechanics workshop or demonstrated equivalent knowledge and skills.

2. To demonstrate competence, at a minimum, evidence is required of testing and assessing two (2) independent electrical circuits and their components according to manufacturers’ specifications. It includes replacing the malfunctioning components and conducting a final performance test. Electrical circuits and/or components are limited to:
   ▪ lighting system components including wiring loom
   ▪ charging system components (including belt drive and/or direct drive, adjustable tensioning devices)
   ▪ starting system components
   ▪ instruments and warning systems (including gauges, horn, clock and cigar lighter circuit, windshield wiper and washer circuit, rear defroster, warning lights, courtesy and dash lamps, car entertainment system, and other non-electronic controlled circuits and devices).

3. Assessment evidence may be collected from a real workplace or a simulated real workplace or an appropriate simulated realistic environment in which automotive mechanics operations are carried out.

4. Performance of all elements in this unit standard must comply with manufacturers' specifications, workplace specific requirements and reasonable flat rate time.

5. Glossary of terms:
   ▪ 'specifications' refers to any, or all of the following: manufacturers’ specifications and recommendations, workplace specific requirements
   ▪ 'service operations' refers to ‘on-vehicle service’ where operations can be directly performed on the vehicle and ‘component repair’ where the operations are done on the workbench after removing the component from the vehicle.

6. Regulations and legislation relevant to this unit standard include the following:
   ▪ Labour Act, No. 6, 1992
- Occupational Health and Safety Regulations No. 18, 1997
- Road Traffic and Transport Regulations No. 266, 2000
and all subsequent amendments.

7. This unit standard applies to passenger and light commercial vehicles with a Gross Vehicle Mass ≤ 5 500 kg (Petrol & Diesel).

Quality Assurance Requirements

This unit standard and others within this subfield may be awarded by institutions which meet the accreditation requirements set by the Namibia Qualifications Authority and the Namibia Training Authority and which comply with the national assessment and moderation requirements. Details of specific accreditation requirements and the national assessment arrangements are available from the Namibia Qualifications Authority and the Namibia Training Authority. All approved unit standards, qualifications and national assessment arrangements are available on the Namibia Training Authority website www.nta.com.na.

Elements and Performance Criteria

Element 1: Plan and prepare for work

Range

Planning and preparation may include but is not limited to workplace inspection, equipment defect identification, assessment of conditions and hazards and determination of work requirements.

Tools and equipment may include but are not limited to standard tool set, soldering equipment, special tools and testing equipment (including multimeter) as per manufacturers’ requirements.

Materials may include but are not limited to spare parts, soldering consumables, and cleaning material.

Performance Criteria

1.1 Work instructions, including repair order forms, specifications and operational details are obtained, confirmed and applied.

1.2 Safety requirements are followed in accordance with safety plans and policies.

1.3 Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults rectified or reported prior to commencement.

1.4 Material requirements are identified and obtained in accordance with repair order form and/or specifications.

1.5 Materials are safely handled and located ready for use in line with workplace procedures.

1.6 Technical and/or calibration requirements for tools and equipment are sourced and implemented in line with workplace procedures.
1.7 Environmental protection requirements are identified and applied in line with environmental plans and regulatory obligations.

**Element 2: Test and assess electrical system components**

**Range**

Testing methods may include but are not limited to reading and interpreting wiring diagrams, interpretation of readings related to faults where the cause may be direct, indirect or intermittent, diagnosing, functional testing, measurements, visual, aural and functional assessment (including damage, corrosion, electrical short or broken circuit, wear) in line with manufacturers’ specifications.

**Performance Criteria**

2.1 Procedures and information required to test and assess the electrical system of a vehicle are identified and sourced in line with workplace procedures.

2.2 Testing is implemented according to workplace procedures and manufacturers’ specifications.

2.3 Testing results are compared with manufacturers’ specifications.

2.4 Faults are identified and documented with evidence and supporting information and recommendation(s) is made in line with workplace procedures.

2.5 Report is forwarded to appropriate personnel according to workplace procedures.

**Element 3: Service electrical system components and/or associated parts**

**Range**

Service operations may include but are not limited to isolation of faults, removing and installing, disassembling and assembling, inspection and evaluation, adjustments, operational testing, repair, replacement, pre- and post-repair testing and visual inspections in line with manufacturers’ specifications.

System components and associated parts may include but are not limited to lighting system components including wiring loom, charging system components (including belt drive and/or direct drive, adjustable tensioning devices), starting system components, instruments and warning systems (including gauges, horn, clock and cigar lighter circuit, windshield wiper and washer circuit, rear defroster, warning lights, courtesy and dash lamps, car entertainment system, and other non-electronic controlled circuits and devices).
**Performance Criteria**

3.1 Procedures and information required for servicing the electrical system of a vehicle are identified and sourced in line with workplace procedures.

3.2 Servicing is implemented according to workplace procedures and manufacturers’ specifications.

3.3 Adjustments made during the service are implemented in line with manufacturers’ specifications.

3.4 Final performance test is conducted and results compared with manufacturers’ specifications in line with workplace procedures.

**Element 4: Complete work and clean up**

**Range**

Work completion details may include but are not limited to repair order form, sign-out form for equipment, service record book and service plan form.

**Performance Criteria**

4.1 Work is completed and appropriate personnel notified in accordance with workplace procedures.

4.2 Work area is cleared of waste, cleaned, restored and secured in accordance with workplace procedures.

4.3 Reusable material is collected and stored in accordance with workplace procedures.

4.4 Equipment used is cleaned, checked, maintained and stored in accordance with workplace procedures.

4.5 Work completion details are finalised in accordance with workplace procedures.
